## ASEPT.1X

### 24/7 AUTOMATED PROTECTION UNIT AGAINST PATHOGENS

The ASEPT.1X unit pushes the limits of surface disinfection by automatically sterilizing bathrooms, which is an aggravating factor of nosocomial diseases caught in hospitals.

Completely automated, the ASEPT.1X unit includes the following safety features: a door contact and two infrared motion detectors. This allows the unit to only operate when no one is in the bathroom, in 5-minute cycles of operation.

ASEPT.1X disinfects 99.99% of contaminants such as ERV, C. difficile, and MRSA by sterilizing the most commonly touched areas.

### BENEFITS

- + Disinfects without contact and without the need of chemical product for bathrooms
- + Sterilizes all surfaces that are regularly touched by patients, visitors and hospital staff
- + Destroys pathogens responsible for nosocomial diseases
- + Reduces the risk of airborne contamination

Unit Dimensions:  
33" x 8" x 5.5"

Lamps Length:  
30"

Installation:  
Stand-Alone
